

Zerto IT Resilience Platform™

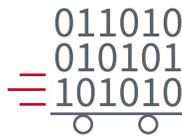

Successful businesses are embracing digital transformation harnessing the power of technology to drive efficiencies, create new experiences, and ultimately beat the competition. These business leaders are relying on their IT organizations to make it happen. Challenged to maximize resources and faced with the complexity of protecting the business while modernizing and transforming, IT leaders are shifting to an IT resilience strategy.

An IT resilience strategy combines continuous availability, workload mobility, and multi-cloud agility to ensure you can withstand any disruption, leverage new technology seamlessly, and move forward with confidence.

Continuous Availability

Protect against any disruption to deliver an always-on customer experience

Workload Mobility

Move application and data workloads with ease, without risk and be 100% protected

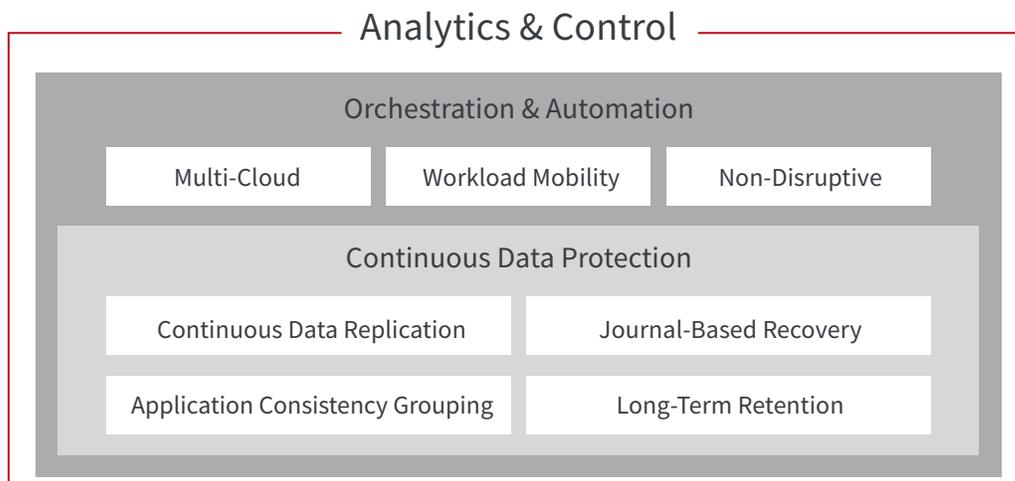

Multi-Cloud Agility

Choose your cloud and be able to move freely to, from and between clouds

As companies embrace new infrastructures and technologies (like cloud), the complexities of IT rise dramatically. Workloads are becoming more diverse, mobile and disparate across different platforms and geographic regions. To solve these challenges, IT must look at managing availability and data recovery through a single IT Resilience Platform™.

The Zerto IT Resilience Platform™ converges backup, disaster recovery and cloud mobility into a single, simple, scalable platform to reduce the costs and complexities of multiple solutions.

The platform is based on a foundation of Continuous Data Protection, it's at the core of enabling resilience. Orchestration and Automation is built in, you can't modernize and innovate if it's not automated and simple. Analytics & Control provide complete visibility across multi-site, multi-cloud environments to ensure SLAs of the business are met.

Continuous Data Protection

Continuous Data Protection with best-of-breed replication delivers the tightest RTOs and RPOs to ensure that when something happens, recovery is quick or when proactive changes like migrations are done it is possible to just rewind if there is a change to the commit.

- **Continuous journal-based recovery** allows you to rewind to any point in time with protection against logical failures not just disasters. Recovery is granular and can be from seconds ago unlike backup or snapshot that could be 4 hours or 1 day out of date. Recovery can be a site, application, VMs or individual files.
- Recovery is not just about data, its about protecting your key business services. The platform uses **application consistency groups** called Virtual Protection Groups (VPG) – this enables customers to protect applications with all their dependencies. VPGs allow you to pre-configure recovery workflows (e.g. boot order, re-IPing, etc.) for fast recovery without any manual intervention.
- The platform addresses your needs for **long-term retention** of data and applications for continuous data protection.

Orchestration and Automation

Orchestration and Automation is built in to enable faster management of workloads at scale with minimal touch to allow IT to shift resources to focus on innovation and implementing services that help the business run more efficiently.

- Supporting your multi-cloud and hybrid cloud strategy, the platform supports Azure, IBM Cloud, AWS and over 350 Cloud Service Providers
- From migrations to consolidations – confidently move workloads and data across heterogeneous environments
- Non-disruptive everything – like testing and compliance – is also a critical component to a resilient infrastructure. The Zerto IT Resilience Platform™ goes beyond disaster recovery allowing you to make your business more efficient.

Analytics and Control

Analytics and Control empowers enterprises to optimize, troubleshoot, and plan with complete visibility across multi-site, multi-cloud environments.

- Intelligent dashboards, live and historical data gathered with Zerto Analytics helps businesses meet SLAs and remain compliant.
- Full featured APIs allow organizations to tightly integrate IT resilience with existing system management, automations, orchestration, and analytics tools for operational excellence.

About Zerto

Zerto helps customers accelerate IT transformation by eliminating the risk and complexity of modernization and cloud adoption. By replacing multiple legacy solutions with a single IT Resilience Platform, Zerto is changing the way disaster recovery, data protection and cloud are managed. With enterprise scale, Zerto's software platform delivers continuous availability for an always-on customer experience while simplifying workload mobility to protect, recover and move applications freely across hybrid and multi-clouds. www.zerto.com
